

## **Staff Gear Review**

### **MSR ® WindPro™ Stove by Jonathan**

I've used a few stoves over the years now and have found ups and downs, success and failures. A stove that has yet to fail on me is the WindPro™ by Mountain Safety Research, (MSR) ®. It features a remote line that is Isobutane, canister adaptable making its set up quick and easy. The remote system also allows for the fuel to be placed further from the burner increasing safety and allowing the aluminum windscreen to separate fuel from fire. Did I mention it's also the lightest remote canister fuel stove on the market? At just a little over 7 oz (200g) it makes this a great backpacking stove for almost any outdoor endeavor. Base camp to the summit, don't forget your WindPro™.

- Less than 7oz (200g)
- Fits comfortable in a 1-liter pot.
- Include manual and maintenance kit.
- Lightest remote canister stove on planet Earth.
